CORTEX

Pre-Launch Tasks

CTA Integration | Mobile Menu Fix | Email Template | Post-Transcript Workflow

April 2026

Task 1: Connect Website CTAs to Cal.com

All “Book a Discovery Call” and “Get Started” buttons on the Cortex website need to point to the Cal.com booking page.

Booking URL

https://cal.com/cortexai/discovery-call

Claude Code Prompt

Copy and paste this prompt into Claude Code to make the changes:

```
Update all CTA buttons across the Cortex website to link to Cal.com.

Booking URL: https://cal.com/cortexai/discovery-call

Requirements:
1. Find every button/link with text like "Book a Discovery Call",
   "Get Started", "Start Your Project", "Book Now", or similar
   CTA text across ALL components and pages.

2. Update their href/onClick to open:
   https://cal.com/cortexai/discovery-call
```

3. For the navbar CTA button, use:

   <a href="https://cal.com/cortexai/discovery-call"

      target="_blank" rel="noopener noreferrer">

   So it opens in a new tab.

4. For hero section and pricing tier CTAs, also use

   target="_blank" rel="noopener noreferrer".

5. For pricing tier buttons specifically:

   - Launch tier: "Get Started" -> links to Cal.com

   - Build tier: "Get Started" -> links to Cal.com

   - Scale tier: "Get Started" or "Contact Us" -> links to Cal.com

6. Do NOT change any button styling, colors, or animations.

   Only update the destination URL.

7. Make sure mobile menu CTA also links to Cal.com.

Search the entire codebase for any hardcoded "#" or

placeholder hrefs on CTA buttons and replace them all.

Expected Result

Every CTA on the site opens Cal.com booking in a new tab. No styling changes. No broken links.

Task 2: Fix Mobile Navigation Menu

The mobile hamburger menu (mega menu on phone) is currently bugged and provides a poor user experience. This prompt will fix it.

Claude Code Prompt

Copy and paste this prompt into Claude Code:

```
Fix the mobile navigation menu on the Cortex website.

The current mobile menu is bugged and needs a complete fix.

Design requirements (matching Cortex brand):

- Full-screen overlay menu on mobile (below 768px)

- Background: #000000 (cortex-base) with 95% opacity

- Backdrop blur for depth

- Smooth open/close animation (slide down or fade in,

  200-300ms, use Motion/Framer Motion if already installed)

- Hamburger icon transforms to X when menu is open

Menu content:

- Navigation links stacked vertically, centered

- Font: Inter, 18-20px, Medium weight, white text

- Links: Services, Process, Pricing, About

  (match whatever the desktop nav uses)

- Active link highlighted in #C8FF00 (chartreuse)
```

- Each link has subtle hover state (chartreuse color)
- CTA button at bottom: "Book a Discovery Call"
  - Background: #C8FF00, text: #000000
  - Links to: https://cal.com/cortexai/discovery-call
  - target="_blank" rel="noopener noreferrer"

Functionality:
- Menu closes when a nav link is clicked
  (smooth scroll to section)
- Menu closes when CTA is clicked
- Menu closes on Escape key press
- Body scroll is locked when menu is open
- Menu properly handles viewport height
  (use min-h-screen or dvh)

Technical:
- Use React state for open/close toggle
- Use Tailwind CSS v4 classes (our project uses v4)
- Ensure the menu z-index is above all other content
- Test that it works on iPhone Safari and Android Chrome
- The hamburger button should be visible only on mobile
  (hidden on desktop, md:hidden or lg:hidden depending
  on breakpoint the desktop nav uses)

```
Do NOT change the desktop navigation at all.

Only fix the mobile experience.
```

Expected Result

Clean, full-screen mobile menu with smooth animations, proper scrolling behavior, and working links. Matches the dark premium brand. Desktop nav untouched.

Task 3: Client Delivery Email Template

This is the email template that gets sent to clients when their brand package is ready. The client receives a ZIP file with a password for security.

Email Subject Line

Your Cortex Brand Package Is Ready

Email Body

CORTEX

Hi [Client Name],

Your brand package is complete and ready for download.

We've attached a secure ZIP file containing your full deliverables. Use the password below to unlock it:

Password: **`[GENERATED_PASSWORD]`**

(Please save this password — you'll need it to access your files.)

What's Inside

Your package includes everything from your [Launch / Build / Scale] tier:

- Logo files (SVG, PNG, PDF) — all color variants
- Brand guidelines document (PDF)
- Color system & typography specifications
- Social media kit (profile photos, covers, post templates)
- [Build/Scale only] Website files & deployment details
- [Scale only] Social media management onboarding guide

Next Steps

1. Download and unzip your package using the password above.
2. Review all deliverables carefully.
3. Reply to this email within 7 days if you need any revisions.
4. [Build/Scale] Your website is live at [URL] — check the deployment guide in your package.

Thank you for choosing Cortex. Your brand is engineered and ready to launch.

If you have any questions, reply directly to this email.

—

Cortex

AI Solutions Agency

hello@cortexagency.ai

cortexagency.ai

Notes on This Template

- [Client Name] — Replace with the client's actual name from the discovery call transcript.
- [GENERATED_PASSWORD] — Generate a unique password per client (8-12 chars, alphanumeric). Send the ZIP as an attachment or via a secure download link.
- [Launch / Build / Scale] — Replace with the client's actual tier. Adjust the "What's Inside" list to match their tier's deliverables.
- Revisions — 7-day window keeps it professional. Adjust as needed.
- ZIP password delivery — Password is in the same email for simplicity. For higher security, you could send the password via a separate channel (SMS, WhatsApp) later.

Task 4: Post-Transcript Workflow (What Happens After the Discovery Call)

This documents the full process from the moment you have a discovery call transcript to the moment the client receives their brand package.

Overview

The discovery call produces a transcript. That transcript contains everything needed to build the client's brand: business details, preferences, goals, tier selection, and budget confirmation. Here's how to turn that transcript into deliverables.

Stage 2: Brand Strategy Analysis

Input

Discovery call transcript (from ElevenLabs)

Output

Brand strategy document — name direction, positioning, audience analysis, competitive landscape, color/mood direction, website requirements

How To Do It (Manual/Subscription Approach)

Open Claude (claude.ai) and paste this prompt along with the full transcript:

```
You are a senior brand strategist at Cortex, an AI solutions agency.

I'm going to give you a discovery call transcript from a new client.

Analyze the transcript and produce a comprehensive Brand Strategy

Document with the following sections:
```

1. CLIENT PROFILE

   - Business name, industry, location, size

   - Key products/services

   - Target audience (demographics, psychographics)

   - Competitors mentioned

2. BRAND POSITIONING

   - Unique value proposition

   - Market positioning statement

   - Brand personality traits (3-5 adjectives)

   - Tone of voice direction

3. VISUAL DIRECTION

   - Recommended color palette (primary, secondary, accent)
     with hex codes and reasoning

   - Typography recommendations (display + body font pairing)

   - Logo direction (style, mood, concepts to explore)

   - Overall aesthetic (modern/classic, minimal/detailed,
     dark/light, etc.)

4. DIGITAL STRATEGY

   - Website structure recommendation (key pages, features)

   - Social media platform priority ranking

```
   - Content pillars (3-5 themes for ongoing content)

   - SEO keyword targets (10-15 primary keywords)

5. DELIVERABLES CHECKLIST

   - Based on their tier [Launch/Build/Scale],

     list every specific deliverable to be created

   - Include specifications for each (dimensions,

     formats, quantities)

Be specific and actionable. Every recommendation should

be directly buildable by the next stage of our pipeline.

Here is the transcript:

[PASTE FULL TRANSCRIPT HERE]
```

Stage 3: Brand Package Generation

Input

Brand strategy document from Stage 2

Output

Complete brand package: logo, color system, typography, brand guidelines PDF, social media kit

Sub-step 3A: Logo Generation

Use the brand strategy's visual direction to generate logo concepts.

```
Tool: Midjourney or Ideogram

Prompt template:

"Minimal, modern logo mark for [business name],

a [industry] company. [Visual direction from strategy].

Clean vector style, single color, scalable,

works on dark and light backgrounds.

Professional, premium feel. --style raw --v 6.1"

Generate 4-6 concepts. Select the best 2-3.

Then vectorize using Vectorizer.ai:

Upload the chosen logo to vectorizer.ai -> download SVG.

Clean up in a vector editor if needed.

Export: SVG (primary), PNG (transparent, multiple sizes),

PDF (print-ready).
```

Sub-step 3B: Brand System (Colors, Typography, Guidelines)

Use Claude to generate the full brand system based on the strategy:

```
You are a brand designer at Cortex. Using the brand strategy

below, generate a complete brand system.
```

Output the following in a structured format:

1. COLOR SYSTEM
   - Primary color + hex
   - Secondary color + hex
   - Accent color + hex
   - Background tones (3 levels: base, surface, elevated)
   - Text hierarchy (primary, secondary, muted)
   - Usage rules for each color

2. TYPOGRAPHY
   - Display font (for headlines)
   - Body font (for text)
   - Type scale (heading sizes, body size, caption size)
   - Weight usage (when to use regular, medium, bold)

3. BRAND VOICE GUIDELINES
   - Voice attributes (3-5 descriptors)
   - Do's and Don'ts
   - Example copy in brand voice (tagline, about section,
     social media bio)

4. SOCIAL MEDIA KIT SPECS
   - Profile photo: 400x400px

```
- Facebook cover: 1640x924px
- Instagram post: 1080x1080px
- Instagram story: 1080x1920px
- LinkedIn banner: 1584x396px
- Twitter/X header: 1500x500px

Brand Strategy:

[PASTE BRAND STRATEGY FROM STAGE 2]
```

Sub-step 3C: Brand Guidelines Document

Use Claude to generate the full brand guidelines document (similar to the Cortex brand doc we created). Output as a structured document that can be converted to PDF.

Sub-step 3D: Social Media Kit

Generate social media templates using the brand system. Use Canva API, Midjourney, or Claude-generated HTML templates converted to images.

Human Review Checkpoint

Before proceeding to delivery, review all generated assets. Check: logo quality, color harmony, typography readability, guidelines accuracy, social media template consistency. Fix any issues before sending to client.

Stage 4: Website Build (Build & Scale Tiers Only)

Input

Brand strategy + brand package from Stages 2-3

Output

Custom website deployed on Vercel

How To Do It

Use Claude Code (Superpowers plugin) with the same workflow used to build the Cortex website. Paste a prompt like:

```
Build a professional website for [Business Name] using

Next.js + Tailwind CSS v4 + Motion (Framer Motion).

Brand System:

- Primary color: [hex]

- Secondary color: [hex]

- Accent color: [hex]

- Display font: [font name]

- Body font: [font name]

- Style: [dark/light, minimal/detailed, etc.]

Pages needed: [from strategy document]

- Home (hero, about, services, testimonials, CTA)

- About

- Services

- Contact

- [Additional pages as specified]
```

Requirements:

- Responsive (mobile-first)

- Fast loading (optimize images, lazy load)

- SEO meta tags on every page

- Contact form

- Deploy-ready for Vercel

Logo and brand assets are in /public/assets/

Human Review Checkpoint

Review the website across devices (desktop, tablet, mobile). Check: responsiveness, loading speed, content accuracy, link functionality, SEO tags. Deploy to Vercel once approved.

Stage 5: Package & Deliver

Process

1. Organize all deliverables into a clean folder structure:

```
[ClientName]-Brand-Package/
  ├─ Logo/
  │    ├─ SVG/
  │    ├─ PNG/
  │    └─ PDF/
  ├─ Brand-Guidelines.pdf
  ├─ Color-System.pdf
  ├─ Typography-Guide.pdf
  ├─ Social-Media-Kit/
  │    ├─ Templates/
  │    ├─ Profile-Photos/
  │    └─ Covers/
  ├─ [Build/Scale] Website-Deployment-Guide.pdf
  └─ README.txt
```

2. Create a password-protected ZIP file of the folder.

3. Generate a unique password (8-12 chars, alphanumeric).
4. Send the delivery email (template above) with the ZIP attached and the password included.
5. For Build/Scale tiers, also share the live website URL in the email.

Creating a Password-Protected ZIP (Terminal Command)

```
zip -er [ClientName]-Brand-Package.zip [ClientName]-Brand-Package/

# The -e flag enables encryption (will prompt for password)
# The -r flag includes all subdirectories
```

Summary: Time Estimates Per Tier

Stage	Launch	Build	Scale
Discovery Call	25 min	25 min	25 min
Brand Strategy	1-2 hrs	1-2 hrs	1-2 hrs
Brand Package	2-4 hrs	2-4 hrs	2-4 hrs
Website Build	—	4-8 hrs	4-8 hrs
Review & Polish	1-2 hrs	2-4 hrs	2-4 hrs
Package & Deliver	30 min	1 hr	1 hr
Total	~1-2 days	~3-5 days	~3-5 days + ongoing

These are estimates for the manual/subscription approach (you doing it with Claude). Times will decrease significantly as you build muscle memory and eventually automate via API.

Pre-Launch Checklist

	Task	Status
✅	Brand identity complete	Done
✅	Website built (visual)	Done
✅	Discovery script v3 written	Done
✅	ElevenLabs agent created	Done
✅	Cal.com setup (cal.com/cortexai/discovery-call)	Done
☐	Connect website CTAs to Cal.com	Ready (use prompt)
☐	Fix mobile navigation menu	Ready (use prompt)
☐	Draft delivery email template	Ready (in this doc)
☐	Document post-transcript workflow	Ready (in this doc)
☐	Buy domain: cortexagency.ai (Cloudflare)	Waiting for launch
☐	Set up professional email	After domain purchase
☐	Buy ElevenLabs Creator plan ($22/mo)	Waiting for launch
☐	Choose English + Arabic voices	After ElevenLabs credits
☐	Test full Stage 1 loop end-to-end	After all above
☐	First client test run (Stages 2-5 manually)	Final validation
